
System Requirements Specification Index

For

- Python Basics and NumPy, Pandas
- Usecase No 9
- 1.0

Use Case No 1: Pharmacy Inventory Management System (PharmacyManagementSystem.py)

Dataset

```
medicines = {
    101: {'name': 'Paracetamol', 'category': 'Painkiller', 'price': 10, 'stock': 100},
    102: {'name': 'Amoxicillin', 'category': 'Antibiotic', 'price': 50, 'stock': 25},
    103: {'name': 'Cetirizine', 'category': 'Antihistamine', 'price': 15, 'stock': 60},
    104: {'name': 'Ibuprofen', 'category': 'Painkiller', 'price': 20, 'stock': 80},
    105: {'name': 'Metformin', 'category': 'Antidiabetic', 'price': 30, 'stock': 40}
}
```

1Write a Python function to count the number of unique medicines available. Define:

count_number_of_unique_medicines()

The function should:

- Extract all unique medicine categories from the dataset.
- Count and return the total number of unique medicines as per category

2Write a Python function to calculate the total stock value of all medicines.

Define: calculate_total_stock_value()

The function should:

- Compute the total stock value using Price * Stock Quantity for each medicine.
- Return the overall stock value.

3Write a Python function to find the medicine with the lowest stock quantity. Define:

find_medicine_with_lowest_stock()

The function should:

- Identify the medicine with the least stock availability.
- Return the medicine name along with the stock quantity as tuple

Use CaseNo 2: Courier Tracking System (CourierTrackingSystem.py)

Dataset

```
shipments = {
    "TRK1001": {
        "sender": "Alice Johnson",
        "recipient": "Bob Smith",
        "current_location": "New York",
        "status": "In Transit"
    },
    "TRK1002": {
        "sender": "Charlie Brown",
        "recipient": "David Lee",
        "current_location": "Chicago",
        "status": "Delivered"
    },
    "TRK1003": {
        "sender": "Eve Miller",
        "recipient": "Frank White",
        "current_location": "San Francisco",
        "status": "Out for Delivery"
    },
}
```

```

"TRK1004": {
    "sender": "George Harris",
    "recipient": "Helen Young",
    "current_location": "Los Angeles",
    "status": "In Transit"
},
"TRK1005": {
    "sender": "Ian Scott",
    "recipient": "Jane Clark",
    "current_location": "Boston",
    "status": "Delivered"
}
}

```

1. Write a Python function to list all shipments with details.

Define: `list_all_shipments()`

The function should:

- Retrieve and return a list of all shipments.
- Include tracking number, sender, recipient, location, and status
- **Return Type:**
The **return value** is a **list**.
The **elements** in that list are **dictionaries**.

2 Define: `check_shipment_status(tracking_number)`

The function should:

- Receive Tracking ID **as parameter**
- Return the current status of the shipment of that tracking ID
- If tracking number not found, return an empty string

Use Case: Donation Management System (**donationmanagementsystem.py**)

Dataset

```

donations = {
    1: {'donor': 'Alice Johnson', 'amount': 100, 'date': '2025-02-25', 'purpose': 'Charity'},
    2: {'donor': 'Bob Smith', 'amount': 50, 'date': '2025-02-26', 'purpose': 'Education'},
    3: {'donor': 'Charlie Brown', 'amount': 200, 'date': '2025-02-25', 'purpose': 'Medical'},
    4: {'donor': 'David Lee', 'amount': 150, 'date': '2025-02-26', 'purpose': 'Charity'},
    5: {'donor': 'Frank White', 'amount': 120, 'date': '2025-02-27', 'purpose': 'Medical'}
}

```

1. Write a Python function to calculate the total amount donated by **donor**

Define: `check_amount_donated(donor_name)`

The function should:

- Receive Donor name as parameter
- Find the amount donated by that donor and return that value

- If donor name not found then return 0

2. Calculate total donation made using the function `calculate_total_donations()`:

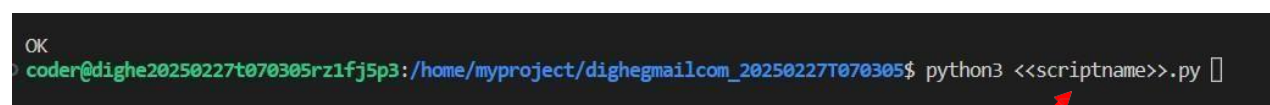

The function should:

- Calculate the total donations made and return the total value

Execution Steps to Follow:

- All actions like build, compile, running application, running test cases will be through Command Terminal.
- To open the command terminal the test takers, need to go to Application menu (Three horizontal lines at left top) -> Terminal -> New Terminal
- This editor Auto Saves the code
- If you want to exit(logout) and continue the coding later anytime (using Save & Exit option on Assessment Landing Page) These are time bound assessments the timer would stop if you logout and while logging in back using the same credentials the timer would resume from the same time it was stopped from the previous logout.
- To setup environment:
You can run the application without importing any packages
- To launch application:
python3 CourierTrackingSystem.py
python3 PharmacyManagementSystem.py
python3 donationmanagementsystem.py
- To run Test cases:
python3 -m unittest

Screen shot to run the program

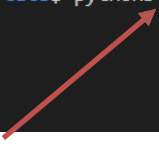

A screenshot of a terminal window with a dark background. The prompt is `coder@dighe20250227t070305r1fj5p3:/home/myproject/dighegmailcom_20250227T070305$`. The command entered is `python3 <<scriptname>>.py`. A red arrow points from the text 'To run the application' below to the placeholder text in the command.

To run the application

```
python3 CourierTrackingSystem.py
python3 PharmacyManagementSystem.py
python3 donationmanagementsystem.py
```

```
● coder@dighe20250227t070305rz1fj5p3:/home/myproject/dighegmailcom_20250227T070305$ python3 -m unittest
TestBoundary = Passed
.TestExceptional = Passed
.TestCalculateTotalDonations = Failed
.TestCalculateTotalStockValue = Failed
.TestCheckFrankWhiteDonated = Failed
```

To run the testcase

python3 -m unittest

The screenshot displays the 'Python-Level1-Template' assessment page. The browser address bar shows the URL: one.techademy.com/assessment-v1/IIHTINTERNAL/test-taker/test/NWZJOTFhMWItMGUyNS00ZDdkLTkxZjY0ODU5NDU3MTYyNTIhMDA2MzI4ZjZlWUwzJ.... The page title is 'Python-Level1-Template'. The top right corner shows 'Time Remaining: 02:54:04' and a 'Submit Assessment' button. The main workspace area features the Visual Studio Code logo and a form for entering the IDE URL and password. The URL is <https://compiler.techademy.com/vsc/cddqw20250224t0114391...> and the password is 'mA4DpEBElf'. Below the password field, it says 'Kindly use this password to login into the IDE' and 'All the questions, files and related documents for this assessment will be available within the IDE'. The sidebar on the left shows a 'Project' dropdown, a user profile 'fighq fdsds' with email 'cddqw@gmail.com', and speed test results: 'Speed Test: >= 10Mbps' and 'Live: 0.41Mbps'. The footer contains the text '50564 | techademy@iiht.com | Privacy Policy' and 'All Rights Reserved by Techademy Learning Solutions Private Limited'.

- **Once you are done with development and ready with submission, you may navigate to the previous tab and submit the workspace. It is mandatory to click on “Submit Assessment” after you are done with code.**
